"Woody on Windows, By Woody Leonhard, Columnist, Computerworld | Sept 11, 2017 9:06 PM PT
https://www.computerworld.com/blog/woody-on-windows/

Time to temporarily turn off Windows Automatic Update
We have only one verified rotten patch out so far this month, but if last month is any indication, many
more are about to come rolling out the Auto Update chute.

If you run Windows — any version — now would be an excellent time to make sure Automatic Update
is turned off. Patch Tuesday arrives tomorrow, and there's no telling what sort of offal will get thrust
onto Windows machines automatically.

Of course, I will be watching closely and will warn you if there's something that has to be installed,
like, right now. If this month is like the vast majority of Windows patching months in the past year or

two, you have more to lose from botched patches than there is to gain by immediately installing security patches.

Last week, we had a bad patch for Word 2016 pushed out the Automatic Update chute. Microsoft has since yanked the patch, but everyone with Auto Update turned on last week got it.

Set a reminder if you need one to look at the state of updating in a week or two. But spare yourself a dip in the unpaid patch beta testing pool.
How to turn off Windows Automatic Update

Last week, I recommended that those of you running the Windows 10 Anniversary Update (version 1511) upgrade to Creators Update (version 1703), based entirely on the sordid patching history of the Anniversary Update.

If you're on Win10 Pro Creators Update, you can use Windows' built-in tools to hold off on the looming patches — just follow the last three steps in 8 steps to install Windows 10 patches like a pro. Other Windows 10 users aren't quite so lucky, but the general approach is detailed in Woody's Win10Tip: Block forced Windows updates.

If you're using Windows 7 or 8.1, the Automatic Update block is easy:

Click Start > Control Panel > System and Security.

Under Windows Update, click the "Turn automatic updating on or off" link. Click the "Change Settings" link on the left. Verify that you have Important Updates set to "Never check for updates (not recommended)" and click OK.

Take a minute right now and make sure Automatic Update is turned off. Then follow along here, or on your favorite Windows bug reporting site, to see what the beta testers have to say.

I've set the MS-DEFCON level to 2 on AskWoody.com – although comments are temporarily disabled."

https://www.computerworld.com/article/3224005/microsoft-windows/time-to-temporarily-turn-off-windows-automatic-update.html

With Patch Tuesday imminent, make sure you have Automatic Update turned off:

https://www.livescience.com/18072-rise-titans-exascale-supercomputers-leap-power-hurdle.html
   The U.S. Department of Energy wants to find a way to make an exascale supercomputer by 2020 that would use less than 20 megawatts of power — about 100 times less than the Hoover Dam's maximum power capacity of 2,074 megawatts that would be needed today.
   Making an exascale supercomputer today would require more [than] the power output equivalent of the Hoover Dam.

Exascale computing refers to computing systems capable of at least **one exaFLOPS**, or a **billion billion calculations per second**. Such capacity represents a thousandfold increase over the first **petascale** computer that came into operation in 2008. https://en.wikipedia.org/wiki/Exascale_computing

Blobwars: Metal Blob Solid – v2.0. https://sourceforge.net/projects/blobwars/. Free GNU General Public License source code and executables for Microsoft® Windows®, FreeBSD®, Apple® macOS™ and GNU/Linux® by Hans de Goede, Guus Sliepen, Stephen Sweeney and Parallel Realities. Metal Blob Solid is a 2D platform game, the first in the Blobwars series. You take on the role of a fearless Blob agent, Bob, whose mission is to infiltrate various enemy bases and rescue as many MIAs as possible, while battling many vicious aliens.

Features include:
- **Over 25 missions**
- **More than 8 hours gameplay!**
- **4 difficulty settings**
- **Large levels with different environments, such as water, lava, ice and slime**
- **Use a variety of different weaponry, including machine guns and laser cannons**

Page 8 **(<u>DY: Read our previous newsletters for more info</u>!!!)**

- **Multiple objectives**
- **Great music from DJ Sjors, Ambick, SinQ and LizardKing**
- **Jetpack and Aqua Lung items to find**
- **Optional blood and gore**
- **Boss Battles!**
- **Joypad support with configurable controls**
- **Configurable keyboard support**
- **Level replay value - Return to previous levels to rescue all MIAs and optional objectives**

[Screenshots at **https://sourceforge.net/projects/blobwars/**]

GraphicsMagick – v1.3.25. http://www.graphicsmagick.org/. Free MIT and other Open Source license source code and executables for Microsoft® Windows®, FreeBSD®, Apple® macOS™ and GNU/Linux® by Bob Friesenhahn, Glenn Randers-Pehrson and the GraphicsMagick Group. **GraphicsMagick is the Swiss Army knife of image processing**. It provides a robust and efficient collection of tools and libraries that support reading, writing, and manipulating an image in over 88 major formats including DPX, GIF, JPEG, JPEG-2000, PNG, PDF, PNM, and TIFF.

GraphicsMagick supports huge images and has been tested with gigapixel-size images. GraphicsMagick can create new images on the fly, making it suitable for building dynamic Web applications. GraphicsMagick may be used to resize, rotate, sharpen, color reduce, or add special effects to an image and save the result in the same or different image format. Image processing operations are available from the command line, as well as through C, C++, Lua, Perl, PHP, Python, Tcl, Ruby, Windows .NET, or Windows COM programming interfaces.

Features include:
- **Convert an image from one format to another (e.g. TIFF to JPEG)**
- **Resize, rotate, sharpen, color reduce, or add special effects to an image**
- **Create a montage of image thumbnails**
- **Create a transparent image suitable for use on the Web**
- **Compare two images**
- **Turn a group of images into a GIF animation sequence**
- **Create a composite image by combining several separate images**
- **Draw shapes or text on an image**
- **Decorate an image with a border or frame**
- **Describe the format and characteristics of an image**

Kernel Source – v4.8.5. http://www.kernel.org/ . Free GNU General Public License source code for all platforms by the Linux community.

Klavaro Touch Typing Tutor – v3.02. http://klavaro.sourceforge.net/ . Free GNU General Public License source code for Microsoft® Windows®, FreeBSD®, Apple® macOS™ and GNU/Linux® by Felipe Castro (executables for older versions are available from third-party sources). Klavaro is a touch typing tutor that supports customizable keyboard layouts. (Klavaro Touch Typing Tutor - YouTube)

Features include:
- **Internationalization: ar bg bn ca cs da de el en_GB eo es eu fi fr gl hu hr it kk ky nb nl pa pl pt_BR ru sl sv te uk ur vi wo zh_CN (if you want to translate to another language, please read the instructions for translation)**
- **Ready to use keyboard layouts:**
- **"qwerty" (AR; BG; BG_2; BR; BR_abnt2; CZ; EL; EO; ES; EU; HE; IN; IT; JP; KK; NB; PT; SE; TR; UK; UR_crulp; UR_nla; US)**

- Dvorak (BG; BR; DE_neo2; EO; FR; FR_bépo; TR; UK; US; US_BR; US_ES; US_SE)
- "qwertz" (CZ; DE; HR; HU; SL)
- "azerty" (FR; FR_ibook; BE)
- "jtsuken" (RU; RU_typewriter; UA)
- Colemak (US)
- AlphaGrip5 (US)
- Keyboard layout editor: configure the key positions and save the result in a simple text file. If your keyboard isn't shown above, you can create it.
- Basic course: a basic type of course is available for memorizing the keys positions on the keyboard. It is supposed to be independent from keyboard layout, by the generation of random character sequences to be followed by the student.
- Adaptability exercises: these exercises use all the keys randomly, so that you can practice using all the keyboard. It's named adaptability exercise because it develops the capacity to adapt your typing skills to any kind of strange words that may appear in some texts.
- Velocity exercises: one achieves velocity on typing when the environment is well known, or, when the words come from one's own language. That's why these exercises focus on velocity. And even if your language isn't supported by the application, you still can indicate texts in any language to include the words contained there.
- Fluidness exercises: with these exercises, one works typing complete paragraphs, with good sense sentences. Typing errors aren't accepted: the user must correct them with the backspace key before being allowed to go on. Special attention is given to the typing rhythm, which must be as uniform as possible. Just like the velocity exercises, this one can load any text files, independent of language.
- Progress charts: at the accomplishment of each exercise, some characteristics of your performance are saved and can be shown graphically. Thus, you can easily observe your learning progress (or regress).
- Including other texts: facilities to import text and use them with the advanced modules (velocity / fluidness). You can launch a dialog to select a local file of the system; you can paste text already copied to the clipboard; and more, you can select, drag and drop text at the entry box in the bottom of the tutor window. This two last facilities work, for example, with text selected in your browser, from any prefered page of yours.
- Semi-online contest: for the last training module (fluidness), there is a scoring scheme to rank users accordingly to their touch typing skills. The ranking is done only locally, for users in a shared machine, or it may be enabled to send the local data to a web server, where they will be proccessed and a global ranking will be publicly available. Then the program would be running as an "online" game.
- Clean graphical interface: when learning to type correctly, one must not get the attention off the exercises. So, it isn't recommended to have dozens of gauges measuring velocity, errors, time, etc; nor a virtual keyboard floating in front of the student: he/she must memorize the key positions by the tact, not visually. Hence, Klavaro's interface started simple and will remain like that for all of its lifetime.

"Five Hidden Dangers of Facebook https://www.cbsnews.com/news/five-hidden-dangers-of-facebook/
Facebook claims it has 400 million users. But are they well-protected from prying eyes, scammers and
unwanted marketers? (**see below)

Not according to Joan Goodchild, senior editor of CSO (Chief Security Officer) Online.
(https://www.csoonline.com/author/Joan-Goodchild/ http://tinyurl.com/yb2ew7qj - from Google.
http://www.careersinfosecurity.com/ & https://holdsecurity.com/ - very interesting stories!)

She says your privacy may be at far greater risk of being violated than you know when you log onto
Facebook, due to security gaffes or marketing efforts by the company.

Facebook came under fire this week, when 15 privacy and consumer protection organizations filed a
complaint with the Federal Trade Commission, charging that the site, among other things,
manipulates privacy settings to make users' personal information available for commercial use. Also,
some Facebook users found their private chats accessible to everyone on their contact list - a major
security breach that's left a lot of people wondering just how secure the site is.

**In two words, asserts Goodchild - not very.

On "The Early Show on Saturday Morning," she spotlighted five dangers she says Facebook users
expose themselves to, probably without aware of it:

• Your information is being shared with third parties
• Privacy settings revert to a less safe default mode after each redesign
• Facebook ads may contain malware
• Your real friends unknowingly make you vulnerable
• Scammers are creating fake profiles

Is Facebook a secure platform to communicate with your friends?

Here's the thing; Facebook is one of the most popular sites in the world. … Security holes are being
found on a regular basis. … It is not as inherently secure as people think it is when they log on every
day.

Certainly, there are growing pains. Facebook is considered a young company and it has been around a
few years now. It is continuing to figure this out. They are so young they are still trying to figure out
how they are going to make money. They don't even have a revenue model yet. It is hard to compare
this to others; we have never had this phenomenon before in the way people are communicating with
each other - only e-mail comes close.

  The potential for crime is real. According to the Internet Crime Complaint Center, victims of Internet-

Page 14: Read our previous newsletters for more info!!!)

related crimes lost $559 million in 2009. That was up 110 percent from the previous year. If you're not careful using Facebook, you are looking at the potential for identity theft, or possibly even something like assault if you share information with a dangerous person you think is actually a "friend." One British police agency recently reported the number of crimes they've responded to in the last year involving Facebook climbed 346 percent. These are real threats.

Lately, it seems a week doesn't go by without some new news about a Facebook-related security problem.

Earlier this week, a publication called "TechCrunch" discovered a security hole that made it possible for users to read their friends' private chats. Facebook has since patched it, but who knows how long that flaw existed? Some speculate it may have been that way for years.

Last month, researchers at VeriSign's iDefense group discovered a hacker was selling Facebook user names and passwords in an underground hacker forum. It was estimated he had about 1.5 million accounts - and was selling them for between $25 and $45.

And the site is constantly under attack from hackers trying to spam these 400 million users, or harvest their data, or run other scams. Certainly, there is a lot of criticism in the security community of Facebook's handling of security. Perhaps the most frustrating thing is that the company rarely responds to inquiries.

Do people really have privacy on Facebook?

No. There are all kinds of ways third parties can access information about you. For instance, you may not realize that, when you are playing the popular games on Facebook, such as Farmville, or take those popular quizzes, every time you do that, you authorize an application to be downloaded to your profile that you may not realize gives information to third parties.

Does Facebook share info about users with third parties through things such as Open Graph?

Open Graph is a new concept for them - they unveiled it last week at a conference. It actually is basically a way to share the information in your profile with all kinds of third parties, such as partner websites, so they can have a better idea of your interests and what you are discussing, so they can - as they portray it - "make it a more personal experience."

The theory behind Open Graph - even if they have not implemented it - is their whole business model, isn't it?

Well, that is the business model - they are trying to get you to share as much information as possible so they can monetize it by sharing it with advertisers.

Isn't it in Facebook's best interest to get you to share as much info as possible?

It absolutely is. Facebook's mission is to get you to share as much information as it can so it can share it with advertisers. As it looks now, the more info you share the more they are going to with advertisers and make more money."

<u>https://www.cbsnews.com/news/five-hidden-dangers-of-facebook/2/</u>
"It is not only sharing the information: Isn't there a security problem every time they redesign the site?

==Every time Facebook redesigns the site, which happens at least a few times a year, it puts your privacy settings back to a default in which, essentially, all of your information is made public. It is up to you, the user, to check the privacy settings and decide what you want to share and what you don't want to share.==

Facebook does not notify you of the changes, and your privacy settings are set back to a public default. Many times, you may find out through friends. Facebook is not alerting you to these changes;
Page 15: Read our previous newsletters for more info!!!)

it is just letting you know the site has been redesigned.

Can your real friends on Facebook also can make you vulnerable?
Absolutely. Your security is only as good as your friend's security. If someone in your network of friends has a weak password and his or her profile is hacked, he or she can now send you malware, for example. There is a common scam called a 419 scam, in which someone hacks your profile and send messages to your friends asking for money - claiming to be you - saying, "Hey, I was in London, I was mugged, please wire me money." People fall for it. People think their good friend needs help - and end up wiring money to Nigeria.

A lot of websites we use display banner ads, but do we have to be wary of them on Facebook? Absolutely: Facebook has not been able to screen all of its ads. It hasn't done a great job of vetting which ads are safe and which are not. As a result, you may get an ad in your profile whey you are browsing around one day that has malicious code in it. In fact, last month there was an ad with malware that asked people to download antivirus software that was actually a virus.

Is too big a network of friends dangerous?

You know people with a lot of friends, 500, 1000 friends on Facebook? What is the likelihood they are all real? There was study last year that concluded that 40 percent of all Facebook profiles are fake. They have been set up by bots or impostors. If you have 500 friends, it is likely there is a percentage of people you don't really know and you are sharing a lot of information with them, such as when you are on vacation, your children's pictures, their names. Is this information you really want to put out there to people you don't even know?"
