“History of Thanksgiving In 1621, the Plymouth colonists and Wampanoag Indians shared an autumn harvest feast that is acknowledged today as one of the first Thanksgiving celebrations in the colonies. For more than two centuries, days of thanksgiving were celebrated by individual colonies and states.

## Open Source Software of the Month

By Geof Goodrum, Potomac Area Technology and Computer Society

November 2016 Issue, PATACS Posts [www.patacs.org](http://www.patacs.org) linux (at) patacs.org

**Blobwars: Metal Blob Solid** – v2.0. <https://sourceforge.net/projects/blobwars/>. Free GNU General Public License source code and executables for Microsoft® Windows®, FreeBSD®, Apple® macOS™ and GNU/Linux® by Hans de Goede, Guus Slieden, Stephen Sweeney and Parallel Realities. Metal Blob Solid is a 2D platform game, the first in the Blobwars series. You take on the role of a fearless Blob agent, Bob, whose mission is to infiltrate various enemy bases and rescue as many MIAs as possible, while battling many vicious aliens.

Features include:

- Over 25 missions
- More than 8 hours gameplay!
- 4 difficulty settings

- Large levels with different environments, such as water, lava, ice and slime
- Use a variety of different weaponry, including machine guns and laser cannons
- Multiple objectives
- Great music from DJ Sjors, Ambick, SinQ and LizardKing
- Jetpack and Aqua Lung items to find
- Optional blood and gore
- Boss Battles!
- Joypad support with configurable controls
- Configurable keyboard support
- Level replay value - Return to previous levels to rescue all MIAs and optional objectives

[Screenshots at <https://sourceforge.net/projects/blobwars/>]

**GraphicsMagick** – v1.3.25. <http://www.graphicsmagick.org/>. Free MIT and other Open Source license source code and executables for Microsoft® Windows®, FreeBSD®, Apple® macOS™ and GNU/Linux® by Bob Friesenhahn, Glenn Randers-Pehrson and the GraphicsMagick Group. GraphicsMagick is the Swiss Army knife of image processing. It provides a robust and efficient collection of tools and libraries that support reading, writing, and manipulating an image in over 88 major formats including DPX, GIF, JPEG, JPEG-2000, PNG, PDF, PNM, and TIFF.

GraphicsMagick supports huge images and has been tested with gigapixel-size images. GraphicsMagick can create new images on the fly, making it suitable for building dynamic Web applications. GraphicsMagick may be used to resize, rotate, sharpen, color reduce, or add special effects to an image and save the result in the same or different image format. Image processing operations are available from the command line, as well as through C, C++, Lua, Perl, PHP, Python, Tcl, Ruby, Windows .NET, or Windows COM programming interfaces.

Features include:

- Convert an image from one format to another (e.g. TIFF to JPEG)
- Resize, rotate, sharpen, color reduce, or add special effects to an image
- Create a montage of image thumbnails
- Create a transparent image suitable for use on the Web
- Compare two images
- Turn a group of images into a GIF animation sequence
- Create a composite image by combining several separate images
- Draw shapes or text on an image
- Decorate an image with a border or frame
- Describe the format and characteristics of an image

[Screenshot at <https://a.fsdn.com/con/app/proj/graphicsmagick/screenshots/gm-snap.jpg>]

**Kernel Source** – v4.8.5. <http://www.kernel.org/>. Free GNU General Public License source code for all platforms by the Linux community.

**Klavaro Touch Typing Tutor** – v3.02. <http://klavaro.sourceforge.net/>. Free GNU General Public License source code for Microsoft® Windows®, FreeBSD®, Apple® macOS™ and GNU/Linux® by Felipe Castro (executables for older versions are available from third-party sources). Klavaro is a touch typing tutor that supports customizable keyboard layouts.

Features include:

- Internationalization: ar bg bn ca cs da de el en\_GB eo es eu fi fr gl hu hr it kk ky nb nl pa pl pt\_BR ru sl sv te uk ur vi wo zh\_CN (if you want to translate to another language, please read the instructions for translation)

**Page 5 ( DY: Read our previous newsletters for more info!!! )**

- Ready to use keyboard layouts:
  - “qwerty” (AR; BG; BG\_2; BR; BR\_abnt2; CZ; EL; EO; ES; EU; HE; IN; IT; JP; KK; NB; PT; SE; TR; UK; UR\_crulp; UR\_nla; US)
  - Dvorak (BG; BR; DE\_neo2; EO; FR; FR\_bépo; TR; UK; US; US\_BR; US\_ES; US\_SE)
  - “qwertz” (CZ; DE; HR; HU; SL)
  - “azerty” (FR; FR\_ibook; BE)
  - “jtsuken” (RU; RU\_typewriter; UA)
  - Colemak (US)
  - AlphaGrip5 (US)
- Keyboard layout editor: configure the key positions and save the result in a simple text file. If your keyboard isn't shown above, you can create it.
- Basic course: a basic type of course is available for memorizing the keys positions on the keyboard. It is supposed to be independent from keyboard layout, by the generation of random character sequences to be followed by the student.
- Adaptability exercises: these exercises use all the keys randomly, so that you can practice using all the keyboard. It's named adaptability exercise because it develops the capacity to adapt your typing skills to any kind of strange words that may appear in some texts.
- Velocity exercises: one achieves velocity on typing when the environment is well known, or, when the words come from one's own language. That's why these exercises focus on velocity. And even if your language isn't supported by the application, you still can indicate texts in any language to include the words contained there.
- Fluidness exercises: with these exercises, one works typing complete paragraphs, with good sense sentences. Typing errors aren't accepted: the user must correct them with the backspace key before being allowed to go on. Special attention is given to the typing rhythm, which must be as uniform as possible. Just like the velocity exercises, this one can load any text files, independent of language.
- Progress charts: at the accomplishment of each exercise, some characteristics of your performance are saved and can be shown graphically. Thus, you can easily observe your learning progress (or regress).
- Including other texts: facilities to import text and use them with the advanced modules (velocity / fluidness). You can launch a dialog to select a local file of the system; you can paste text already copied to the clipboard; and more, you can select, drag and drop text at the entry box in the bottom of the tutor window. This two last facilities work, for example, with text selected in your browser, from any preferred page of yours.
- Semi-online contest: for the last training module (fluidness), there is a scoring scheme to rank users accordingly to their touch typing skills. The ranking is done only locally, for users in a shared machine, or it may be enabled to send the local data to a web server, where they will be processed and a global ranking will be publicly available. Then the program would be running as an “online” game.
- Clean graphical interface: when learning to type correctly, one must not get the attention off the exercises. So, it isn't recommended to have dozens of gauges measuring velocity, errors, time, etc; nor a virtual keyboard floating in front of the student: he/she must memorize the key positions by the tact, not visually. Hence, Klavaro's interface started simple and will remain like that for all of its lifetime.

[Screenshots at <https://sourceforge.net/projects/klavaro/>]

**NAS4Free** – v10.3.0.3-2964. <http://www.nas4free.org/>. Free NAS4Free (BSD) License bootable ISO image by Daisuke Aoyama, Michael Zoon, Michael Schneider et al. The NAS4Free operating system can be installed on virtually any hardware platform to share computer data storage over a computer network (i.e., turn an old PC into a secure network file server). ‘NAS’ as in “Network-Attached Storage” and ‘4Free’ as in “Free and open source”, NAS4Free is the simplest and fastest way to create an centralized and easily-accessible server for all kinds of data!

NAS4Free supports sharing across Windows, Apple, and UNIX-like systems. It includes ZFS, Software RAID (0,1,5), disk encryption, S.M.A.R.T / email reports, etc. with following protocols/services: CIFS/SMB (i.e., Windows network file system), Samba AD, FTP, NFS v4, TFTP, AFP, RSYNC, Unison, iSCSI, UPnP, Bittorent, Syncthing, VirtualBox and noVNC, Bridge, CARP (Common Address Redundancy Protocol) and HAST (Highly Available Storage).

This can be managed by an easily configurable web interface.

[Screenshots at <http://www.nas4free.org/index.php?id=4>]

**Sweet Home 3D** – v5.2. <http://www.sweethome3d.com/>. Free GNU General Public License source code and executables for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by Emmanuel Puybaret and eTeks. Sweet Home 3D is an interior design application that helps you to quickly draw the floor plan of your house, arrange furniture on it, and visit the results in 3D.

Features include:

- Draw walls and rooms upon the image of an existing plan, on one or more levels
- Drag and drop doors, windows and furniture from a catalog onto the plan
- Update colors, texture, size and orientation of furniture, walls, floors and ceilings
- View all changes simultaneously in the 3D view from any view point
- Create photorealistic images and videos with various light sources
- Import additional 3D models and export the plan in various standard formats

[Screenshots at <http://www.sweethome3d.com/gallery.jsp>]

---

## Open Source Software of the Month - September

By Geof Goodrum, Potomac Area Technology and Computer Society

September 2016 Issue, PATACS Posts [www.patacs.org](http://www.patacs.org) linux (at) patacs.org

**crosti/Stitch Designer** – v1.13.2. <https://sites.google.com/site/croستيapp/>. Free GNU General Public License source code and executables for Microsoft® Windows®, Apple® macOS™, Google Android and GNU/Linux® by Sergey Levin. This tool allows you to make your own unique cross stitch scheme from a custom image. You can resize and rotate the image, reduce the number of colors, change image palette, make cross stitch scheme, preview it, save and print. Cross stitch scheme edits include changing colors and icons, adding new color, color fill, scheme pixel draw, lines and half-stitches.

Features include:

- Convert custom image to cross stitch scheme
- Edit cross stitch scheme
- Save and print the scheme that you created
- Input pictures: BMP, GIF, ICO, JPEG, JPG, MNG, PBM, PGM, PNG, PPM, SVG, TIF, TIFF, XBM, XPM
- Output cross stitch scheme: BMP, ICO, JPEG, JPG, PNG, PPM, TIF, TIFF, XBM, XPM, PDF, CST (crosti scheme text file)

[Screenshots at <https://sites.google.com/site/croستيapp/desktop>]

**jGnash** – v2.24.0. <https://sourceforge.net/projects/ignash/>. Free GNU General Public License source code and executables for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by Craig Cavanaugh. jGnash is a cross platform personal finance application written in Java. Features include:

- Double Entry Accounting with reconciliation tools
- Budgeting with multiple scenario options and export to spreadsheet capability
- Investment Accounts and automatic import of Stocks, Bond, and Funds price history
- Nestable accounts with automatic rollup of totals and intelligent handling of mixed currencies
- OFX, QFX, mt940, and QIF import capabilities
- Reminders and automatic transaction entry and notifications
- Intelligent handling of multiple currencies and exchange rates with automatic online exchange rate updates
- Printable reports with PDF and spreadsheet export capability
- XML and relational database file formats
- Operates on any mainstream PC operating system

[Screenshots at <https://sourceforge.net/projects/ignash/>]

**Kernel Source** – v4.7. <http://www.kernel.org/>. Free GNU General Public License source code for all platforms by the Linux community.

**PDFsam** – v3.1.0. <https://sourceforge.net/projects/pdfsam/>. Free Affero GNU Public License source code and executables for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by Andrea Vacondio. PDF Split and Merge (PDFsam) is an easy-to-use desktop tool with graphical, command line and web interfaces. Features include:

- Merge PDF files together
- Split PDF files specifying the page number
- Split PDF files specifying the level of bookmarks
- Split a PDF in files of the given size
- Rotate PDF files
- Mix two PDF files taking pages alternately
- Extract pages from PDF files

[Screenshots at <https://sourceforge.net/projects/pdfsam/>]

**SuperTuxKart** – v0.9.2. [https://supertuxkart.net/Main\\_Page](https://supertuxkart.net/Main_Page). Free GNU General Public License source code and executable for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by Joerg Henrichs, Marianne Gagnon, Jean-Manuel Clemençon and the SuperTuxKart Team. SuperTuxKart is a 3D open-source arcade racer with a variety characters, tracks, and modes to play, focusing on fun and ease of play. Features include:

- Race with Tux and friends
- Explore several tracks
- Play against AI or in split-screen mode against your friends
- Play in various modes, including Time Trial, Grand Prix and 3 Strikes Battle

[Screenshots at <https://supertuxkart.net/Pictures>]

---

## Open Source Software of the Month

By Geof Goodrum, Potomac Area Technology and Computer Society  
October 2016 Issue, PATACS Posts [www.patacs.org](http://www.patacs.org) linux (at) patacs.org

**Page 8 ( DY: Read our previous newsletters for more info!!! )**

**Audacity** – v2.1.2. <http://www.audacityteam.org/>. Free GNU General Public License source code and executables for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by James Crook, Martyn Shaw, Vaughan Johnson and Gale Andrews. Audacity® is free, open source, cross-platform audio software for multi-track recording and editing.

Features include:

- Record live audio
- Record computer playback on any Windows Vista or later machine
- Convert tapes and records into digital recordings or CDs
- Edit WAV, AIFF, FLAC, MP2, MP3 and Ogg Vorbis sound files
- AC3, M4A/M4R (AAC), WMA and other formats supported using optional libraries
- Cut, copy, splice or mix sounds together
- Numerous effects including change the speed or pitch of a recording

[Screenshots at <http://www.audacityteam.org/about/screenshots/>]

**Battle for Wesnoth** – v1.12.6. <https://www.wesnoth.org/>. Free GNU General Public License source code and executables for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by David White et al. The Battle for Wesnoth is a turn-based tactical strategy game with a high fantasy theme, featuring both singleplayer, and online/hotseat multiplayer combat. Fight a desperate battle to reclaim the throne of Wesnoth, or take hand in any number of other adventures.

Features include:

- Cross-platform: runs on Windows, Mac OS X, Linux, and others
- Single-player mode: campaigns and skirmish
- Multiplayer mode: networked and hotseat, cooperative and competitive
- Multilingual: over fifty available translations to choose from
- Extensible: user-made content from the add-ons server

[Screenshots at <https://wiki.wesnoth.org/Screenshots>]

**Clonezilla** – v2.4.7-8. <http://clonezilla.org/>. Free GNU General Public License source code and bootable media image by Steven Shiau, K. L. Huang, Ceasar Sun, Jazz Wang, Thomas Tsai, Jean-Francois Nifenecker, Louie Chen, and Nagappan Alagappan. Clonezilla is a partition and disk imaging/cloning program similar to True Image® or Norton Ghost®. It helps you to do system deployment, bare metal backup and recovery. Two types of Clonezilla are available, Clonezilla live and Clonezilla SE (server edition). Clonezilla live is suitable for single machine backup and restore. While Clonezilla SE is for massive deployment, it can clone many (40 plus!) computers simultaneously. Clonezilla saves and restores only used blocks in the hard disk. This increases the clone efficiency. With some high-end hardware in a 42-node cluster, a multicast restoring at rate 8 GB/min was reported.

Features include:

- Many File systems are supported: (1) ext2, ext3, ext4, reiserfs, reiser4, xfs, jfs, btrfs, f2fs and nilfs2 of GNU/Linux, (2) FAT12, FAT16, FAT32, NTFS of MS Windows, (3) HFS+ of Mac OS, (4) UFS of FreeBSD, NetBSD, and OpenBSD, (5) minix of Minix, and (6) VMFS3 and VMFS5 of VMWare ESX. Therefore you can clone GNU/Linux, MS windows, Intel-based Mac OS, FreeBSD, NetBSD, OpenBSD, Minix, VMWare ESX and Chrome OS/Chromium OS, no matter it's 32-bit (x86) or 64-bit (x86-64) OS. For these file systems, only used blocks in partition are saved and restored. For unsupported file system, sector-to-sector copy is done by dd in Clonezilla.
- LVM2 (LVM version 1 is not) under GNU/Linux is supported.
- Boot loader, including grub (version 1 and version 2) and syslinux, could be reinstalled.

**Page 9 ( DY: Read our previous newsletters for more info!!! )**

- Both MBR and GPT partition formats of hard drive are supported. Clonezilla live also can be booted on a BIOS or uEFI machine.
- Unattended mode is supported. Almost all steps can be done via commands and options. You can also use a lot of boot parameters to customize your own imaging and cloning.
- One image restoring to multiple local devices is supported.
- Image could be encrypted. This is done with ecryptfs, a POSIX-compliant enterprise cryptographic stacked filesystem.
- Multicast is supported in Clonezilla SE, which is suitable for massively clone. You can also remotely use it to save or restore a bunch of computers if PXE and Wake-on-LAN are supported in your clients.
- The image file can be on local disk, ssh server, samba server, NFS server or WebDAV server.
- AES-256 encryption could be used to secure data access, storage and transfer.
- Based on Partclone (default), Partimage (optional), ntfsclose (optional), or dd to image or clone a partition. However, Clonezilla, containing some other programs, can save and restore not only partitions, but also a whole disk.
- By using another free software drbl-winroll, which is also developed by us, the hostname, group, and SID of cloned MS Windows machine can be automatically changed.

Minimum System Requirements for Clonezilla live:

- x86 or x86-64 processor
- 196 MB of system memory (RAM)
- Boot device, e.g. CD/DVD Drive, USB port, PXE, or hard drive

Limitations:

- The destination partition must be equal or larger than the source one.
- Differential/incremental backup is not implemented yet.
- Online imaging/cloning is not implemented yet. The partition to be imaged or cloned has to be unmounted.
- Due to the image format limitation, the image can not be explored or mounted. You can NOT recover a single file from the image.
- Recovery Clonezilla live with multiple CDs or DVDs is not implemented yet. Now all the files have to be in one CD or DVD if you choose to create the recovery ISO file.

[Screenshots at [http://clonezilla.org/screenshots/?in\\_path=/00\\_Clonezilla](http://clonezilla.org/screenshots/?in_path=/00_Clonezilla)]

**Kernel Source** – v4.7.2. <http://www.kernel.org/>. Free GNU General Public License source code for all platforms by the Linux community.

**Wmail** – v1.3.1. <https://github.com/Thomas101/wmail>. Free redistributable source code and executables for Microsoft® Windows®, Apple® macOS™ and GNU/Linux® by Thomas Beverley. Wmail is the missing desktop client for Gmail & Google Inbox, bringing the Gmail & Google Inbox experience to your desktop in a neatly packaged app.

This is a small release with some bugfixes and performance improvements. Nonetheless, you should totally upgrade. It still contains all the awesome from all the previous releases.

Features include:

- Windows Support
- You can now hide and show the sidebar thanks to @alexweber
- Added an option for accounts not add unread count to app unread
- Ability to set default download location

**Page 10 ( DY: Read our previous newsletters for more info!!! )**

- Custom account images
- Open link in background appears in right click menu
- Toggle menu bar linux, thanks to @jamesbvaughan
- Option to open links in background
- Tray icon color picker
- You can now change your account colour in the side menu
- The settings dialog has been tidied up a little
- Notifications & Unread counts
- The unread count is updated in a more responsive way
- Notifications now show subject and sender
- Option to disable notification sound
- Option to disable notifications completely
- Notifications no longer trigger on messages more that 2 days old stopping an onslaught the first time you launch the app
- Notifications no longer trigger when you press mark as unread in gmail
- Unread count in tray icon
- Menu and keyboard shortcuts for re-opening menus (cmd+n)
- Menu and keyboard shortcut for preferences
- Support for dark menu bar on OSX
- Services menu in menu bar
- Keep the app open on linux after closing main window thanks to @russiancow
- Dragging the black sidebar now drags the window
- Updated electron to the latest version for bug fixes and performance
- Updated a bunch of libraries and framework for better stability and latest security fixes, etc.

“Windows by the numbers: Windows 7 acts like it will live forever - Migration watch: In September, Windows 7 surrendered some user share, but it still refused to plan for retirement.

[https://www.computerworld.com/article/3199373/windows-pcs/windows-by-the-numbers-windows-7-falls-further-behind-xps-march-to-retirement-pace.html#tk.drr\\_mlt](https://www.computerworld.com/article/3199373/windows-pcs/windows-by-the-numbers-windows-7-falls-further-behind-xps-march-to-retirement-pace.html#tk.drr_mlt)

Microsoft has set Windows 7's retirement for January 2020, a date that is quickly approaching. The slower Windows 7 declines in user share, the greater the chance that panicked businesses will overspend to replace the operating system with Windows 10, causing a repeat of the chaotic end times of Windows XP. With 30 months left before Microsoft retires Windows 7, the stalwart OS stayed in command of the personal computer world.”

**Defending the U.S. from North Korea's nuclear threat**

North Korea is on the verge of having an ICBM capable of hitting the U.S. homeland. 60 Minutes goes inside the intelligence center at the heart of the United States' defense

<https://www.cbsnews.com/news/defending-the-u-s-from-north-koreas-nuclear-threat/>

After years of threatening to burn the United States in a sea of fire, North Korea is on the verge of having an intercontinental ballistic missile -- an ICBM -- capable of hitting the American homeland with

**Page 14** (DY: Read our previous newsletters for more info!!! )

a thermonuclear warhead. The missile is called the Hwasong -- which translates to Mars, the Roman God of War.

North Korea's brash, young dictator Kim Jong Un is not there yet and will need several more tests before he has a weapon he can count on. Still, the chairman of the Joint Chiefs calls it the greatest threat facing the U.S. today. Defense Secretary James Mattis went to the DMZ two days ago and vowed to stand with South Korea against the north.

Tracking that threat, and helping to come up with defenses against it, is the job of the National Air and Space Intelligence Center, NASIC for short, located near Dayton, Ohio. If you've never heard of NASIC, that's because television news cameras have never been inside its operations center -- until now.

This is the God of War, North Korea's intercontinental ballistic missile.

<https://cbsnews3.cbsistatic.com/hub/i/r/2017/10/28/92de15dd-6a61-412a-8ab1-6b9c34e30b03/resize/770x/d636315b6f548c3b307814cc463eaf75/nasic-animation-1.jpg>

Tom Boyd: They've been referred to as the ultimate weapon. They get to the target very quickly. An ICBM has a reentry velocity on the order of four to five miles per second, so there's very little time to react.

So how long before North Korea can really threaten the American homeland with an ICBM?

Tom Boyd: Probably several more flight tests, but ultimately if they want to have confidence that the system works as intended they have to flight test it and prove that reentry vehicle can survive realistic reentry conditions.

David Martin: So that really is then the moment of truth when they launch, if they launch, a ballistic missile out over the Pacific Ocean at a range approximating what it would take to reach the United States.

Tom Boyd: That would give them higher confidence that the system really works as they want it to. At the rate North Korea is testing, U.S. intelligence estimates that could happen as early as next year.

<https://www.cbsnews.com/news/qatars-emir-stands-defiant-in-face-of-blockade/>

Qatar is the non-conformist of the region, an upstart that often refuses to go along with Saudi Arabia and the United Arab Emirates. In the mid-nineties, Qatar started the satellite news channel Al Jazeera, which has been a major irritant to autocratic regimes across the Arab world, but the list of complaints goes deeper.

## HOW TO GET THERE - MAPS TO MEETINGS

### West-Side-Meeting

#### CollegeAmerica

[www.collegeamerica.edu/phoenix](http://www.collegeamerica.edu/phoenix)

9801 N Metro Parkway East

Phoenix, AZ 85051

Phone: (602) 257-7522

Google map error, "the red A" is actually east side of Metro Parkway

Exit Peoria Ave west, past I-17, turn first left, go south on the frontage road, turn right at the first driveway past Cheryl Drive, CollegeAmerica is the white building on your right (north). North of Castles & Coasters amusement park.

### East Side Meeting

The University for Advancing Technologies

2625 W Baseline Rd, Tempe  
South side of Baseline Rd, one block west of Fry's Electronics.

### Fountain Hills Meeting

Fountain Hills Library  
12901 N La Montana Dr, Fountain Hills

Just west of the fountain.

Co-located with the Fountain Hills Library and Museum.

( DY: Read our previous newsletters for more info!!! )
