10 compelling reasons to upgrade to Windows 10 Brad Chacos @BradChacos Jul 15, 2016 3:00 AM http://www.pcworld.com/article/3093793/windows/10-compelling-reasons-to-upgrade-to-windows-10.html "An offer you shouldn't refuse
The deadline cometh. July 29 looms, and after that, Windows 7 and 8 users will no longer be able to upgrade to Windows 10 for free. If you've been waiting for Microsoft to polish out the operating system's initial bugs, it's time to make the leap."

"This article's more for the fence-sitters—the folks who haven't decided whether to stick with what they know or embrace Microsoft's new-school operating system. There are some very valid reasons not to upgrade to Windows 10, to be honest. But Windows 10 is the best Windows yet, and most people should claim the free upgrade while there's still time.
Here's why." http://www.pcworld.com/article/3093793/windows/10-compelling-reasons-to-upgrade-to-windows-10.html 12 web pages all the way to: http://www.pcworld.com/article/3093793/windows/10-compelling-reasons-to-upgrade-to-windows-10.html#slide12

The only <u>unbreakable</u> cryptosystem known - the <u>Vernam</u> cipher
www.pro-technix.com/information/crypto/pages/vernam_base.html
   What was devised was the only provably unbreakable encryption scheme known to this day. Compared with most cryptosystems it is a very simple. To use a ...
    There is only one perfectly secure cryptosystem known
   Of all the methods of encryption ever devised, only one has been mathematically proved to be completely secure. It is called the Vernam cipher or one-time pad. The worth of all other ciphers is based on computational security. If a cipher is computationally secure this means the probability of cracking the encryption key using current computational technology and algorithms within a reasonable time is supposedly extremely small, yet not impossible. In theory, every cryptographic algorithm except for the Vernam cipher can be broken given enough cipher text and time."

——

http://www.cryptomuseum.com/crypto/vernam.htm (Excellent explanation here, DY)
    "The Vernam Cipher   Digital bit-wise XOR
The Vernam Cipher is based on the principle that each plaintext character from a message is 'mixed' with one character from a key stream. If a truly random key stream is used, the result will be a truly 'random' ciphertext which bears no relation to the original plaintext. In that case the cipher is similar to the unbreakable One-Time Pad (OTP). As it was generally used with teleprinters and 5-level punched tape, the system is also known as One-Time Tape or OTT." (See above web link, DY)

https://www.google.com/?gws_rd=ssl#q=vernam+cipher+example+youtube
https://www.google.com/?gws_rd=ssl#q=vernam+cipher+supercomputer

——

"Use Tor? <u>Riffle</u> promises to protect your privacy even better
http://www.computerworld.com/article/3095463/security/meet-riffle-the-anonymity-network-from-mit-that-promises-to-outdo-tor.html
   Privacy-minded people have long relied on Tor for anonymity online, but a new system from MIT promises better protection and faster performance.

   Dubbed <u>Riffle</u>, the new system taps the same onion encryption technique after which Tor is named, but it adds two others as well. First is what's called a mixnet, a series of servers that each rearranges the order in which messages are received before passing them on to the next server.
   If messages arrive at the first server in the order A, B, C, for example, that server would send them to the second server in a different order, such as C, B, A. The second server would them reshuffle things again when sending the messages on. The advantage there is that a would-be attacker who had tracked the messages' points of origin would have no idea which was which by the time they exited the last server."

——

"<u>Code talker </u> - Wikipedia, the free encyclopedia https://en.wikipedia.org/wiki/Code_talkerWikipedia
The name code talkers is strongly associated with bilingual Navajo speakers specially recruited during World War II by the Marines to serve in their standard communications units in the Pacific Theater. Code talking, however, was pioneered by Cherokee and Choctaw Indians during World War I."
   (Of course, this was before modern computers, smartphones, etc. but communicating and translating info from place to another is still vital to the defense of America. See "<u>Wind Talkers</u>" movie DY)

"Will Microsoft Promos Move the Needle on Windows 10 Adoption? http://www.eweek.com/
The company is offering customers a free Dell laptop if Microsoft staffers fail to complete a same-day Windows 10 upgrade on compatible systems. The Windows 10 free upgrade offer expires on July 29 and Microsoft is incentivizing holdouts with some last-minute perks.

The company has launched a Windows 10 Upgrade Challenge program at its brick-and-mortar stores, offering customers a free Dell laptop if Microsoft staffers fail to complete a same-day Windows 10 upgrade on compatible systems. "If your PC meets all of the requirements, our team will upgrade your PC to Windows 10. If we don't upgrade your PC by close of business, you'll get a free Dell Inspiron 15," states the program's Web page.

Ensuring that Microsoft Store technicians have plenty of time to complete the upgrade, customers must check in their PCs by noon local time at participating locations. Customers whose PCs don't make the cut will receive a $150 credit that can be used to purchase a new PC. Additionally, Microsoft is offering upgraders $20 off the price of an Office 365 Home subscription.

Whether the latest promotion moves the needle on Windows adoption remains to be seen."

The PC upgrade cycle slows to every five to six years, Intel's CEO says
http://www.cio.com/article/3078005/the-pc-upgrade-cycle-slows-to-every-five-to-six-years-intels-ceo-says.html
"The upgrade cycle for PCs has slowed down drastically, now extending to nearly six years, Intel CEO Brian Krzanich said on Wednesday. People are instead buying 2-in-1 PCs, which can be used as tablets and laptops, and shipments of those devices are growing in an otherwise slumping PC market. The decline in PC shipments will level out at some point, Krzanich said, though he wasn't sure when. Intel is now making the transition from being a PC-centric to cloud- and Internet-of-Things-centric company. But the PC market, and its large annual volume of 270 million units, remains important to Intel, and it fuels development of core chip technologies, memory, and SSDs, Krzanich said."

 "Encryption -- the use of mathematics to protect communications from spying -- is used for electronic transactions of all types, by governments, firms and private users alike. But a look into the archive of whistleblower Edward Snowden shows that not all encryption technologies live up to what they promise.
 One example is the encryption featured in Skype, a program used by some 300 million users to conduct Internet video chat that is touted as secure. It isn't really. "Sustained Skype collection began in Feb 2011," reads a National Security Agency (NSA) training document from the archive of whistleblower Edward Snowden." (And more info… DY)

https://techcrunch.com/2016/07/07/android-full-disk-encryption/

"Qualcomm says it issued patch for Android encryption flaw over a year ago. Kate Conger

Cracking encryption is a topic of perpetual fascination.
Congress has made several efforts to legislate it. The FBI tried to force Apple to do it. New messaging apps constantly debut with claims about strong encryption, and controversy bubbles when they neglect it.

So when a researcher discovered a flaw in Android's full disk encryption scheme last week that allowed for decryption of the device, it seemed at first like a revolutionary security discovery.

But chipmaker Qualcomm now claims it told Google about the vulnerabilities in November 2014 and February 2015. Google issued patches in January and May of this year — meaning that the company may have known about the problem for over a year before rolling out fixes."

_____

What's New Bringing Technology to Those Who Need It Most

As stated in our Guidelines to Giving: We donate equipment to Arizona schools listed with the Arizona Department of Education (public or nonprofit).

Now within all of these schools we have a higher desire to assist Title 1 schools. What is a Title 1 school? A Title 1 school is a school that has at least 40% of their students who qualify as a Title 1 student. What is a Title 1 student? A Title 1 student is eligible for the Free and Reduced school lunch program. This is a definitive measurement of financial need. Thus, schools that qualify as Title 1 schools are serving a large quantity of students with significant financial need.

There are many schools and school districts within our state that have over 70% Title 1 students! We are convinced that these schools and school districts could benefit from additional technology to serve these populations. Currently, we have been blessed with VERY generous corporate donations.

For each of the past five years AZ StRUT has donated at least $500,000 worth of equipment to Arizona schools and 501(c)3 nonprofits. That's 2.5 million dollars of equipment over the last five years. We are biased, but this must be one of the most effective grassroot efforts.

Yes, we are still donating to 501c3 nonprofits, and yes, we are still delivering Techie Camps to primarily Title 1 students. However, it is summer and these Title 1 schools are attempting to put technology into classrooms with still limited funds. I don't believe they have yet received the windfall promised from the recent proposition. Yes, we are looking forward to help from our refurbishing partner schools when they return in August.

Currently, <u>we are donating 64 bit desktop and laptop computers to Arizona schools</u>. While confirming the request, we perform a technology needs assessment to determine how we help with equipment other than computers. (Such as printers, multi-function printers, networking gear, etc. DY)

Thank you for your continued support! Tom Mehlert, Executive Director, AZ StRUT http://azstrut.org/

───

http://www.post-gazette.com/business/tech-news/2016/07/17/FCC-approves-next-generation-of-wireless-innovation/stories/201607140172

"FCC approves next generation of wireless innovation: 5G   By Ed Blazina / Pittsburgh Post-Gazette The Federal Communications Commission last week approved guidelines for the next revolution in wireless technology that <u>some predict could be the biggest economic generator in history</u>. But no one can say yet exactly what the revolution will bring.

The agency's commissioners Thursday <u>unanimously approved rules that will open up little-used, high frequency airwaves</u> for uses that could range from <u>telecommunications to medicine, self-driving cars, factories and smart house appliances such as refrigerators</u> that automatically reorder food once it is used.

New technology still being developed will allow more extensive use of the short waves that will greatly expand the capacity for carrying information on the new system, which will be known as 5G, for fifth generation. About every 10 years, there's a quantum leap in wireless that moves the technology up a generation, and the fruits of this next step probably will begin rolling out in 2020." (web link above)

───

"Google Builds Quantum-Proof Encryption for Chrome http://www.pcmag.com/news/345931/google-builds-quantum-proof-encryption-for-chrome Breaking HTTPS encryption would be too easy for quantum computers.

Google engineers are concerned that the advanced cryptography capabilities of future quantum computers will make it laughably easy to break even the most secure encryption available today. So they're working on modifications to the Chrome browser that will use so-called post-quantum algorithms to try and stump code breakers of the future.

If you're a little fuzzy on the intersection between quantum computing, cryptography, and encryption, PCMag recently visited the Los Alamos National Laboratory in New Mexico to get some real quantum computing engineers to explain the basics.

Essentially, Los Alamos engineers are betting that quantum cryptography could confound modern spies by placing encrypted data inside an indivisible photon. According to Google, it could just as easily crack today's HTTPS encryption."

25 Things Women Say That Men Misunderstand
http://list25.com/25-things-women-say-that-men-misunderstand/

You've probably tried learning French, Spanish, or German, but those are nothing compared to Woman (the language). Most scholars agree that the only thing more impossible than understanding the language of women is dividing by 0.

You have no hope. Don't even try. Whatever. See?
You probably thought that all of that means you should just give up and not try anymore right?

Wrong! Any woman will tell you that in the language of women, it means the complete opposite. Here are 25 things women say that men misunderstand.
No. It means "no". Yes. In most cases this also means no.
There are exceptions but they are very hard to distinguish. Maybe. Still no.

It would be nice if… Everything following the "if" is meant to be interpreted as an unconditional order. Fine. This means the argument is over and you lost. (See above web link for more, DY)

"Cyborg locusts? Washington University researchers think bugs could be used to sniff out bombs

http://www.stltoday.com/news/science/cyborg-locusts-washington-university-researchers-think-bugs-could-be-used/article_2af2a92c-f822-569b-b9ea-2abf51672820.html

A locust is fitted with an preliminary stage prototype device, with an electrode implanted in the insect's brain that will monitor its neural activity as it detects smells, on Thursday, July 7, 2016 at Washington University.

Locust antennae act as a nose, with sensors more complex than any chemical sensor an engineer could make. A group of researchers at Washington University hope to hijack that sense of smell, using bioengineering to create the ultimate smelling machine. By using sensors that monitor locusts' brain activity, researchers would be able to tell what chemicals the locust is smelling.

The possibilities? Picture a swarm of locusts sent out on a mission to sniff out bombs. Researchers picture the bugs helping the military detect landmines, or verifying bomb threats at airports. If all goes as planned, bionic bugs could join the ranks of police dogs and land-mine sniffing rats in detecting explosive devices." (See above web link for more info: DY)
